

Your 1500 Calorie Meal Plan

Eating healthy is an important part of managing your diabetes. The food in your meal plan will provide the calories and nutrients you need each day to manage your blood sugar and to give you the energy you need for healthy living.

You can use the following guidelines to estimate how many calories are needed per day to help maintain your weight.

For every pound of weight, calculate:

- 10 calories for an adult who is obese, very inactive, or always dieting
- 13 calories for an adult over 55 years of age, an active woman, or an inactive man
- 15 calories for a very active woman or an active man
- 20 calories for a very active man or an adult athlete

To lose weight, you'll need to eat fewer calories. To gain weight, you'll need to eat more calories. Ask your doctor to refer you to a registered dietitian (RD). This person can help you make a meal plan. You want to have the right balance of food, medicine, and activity.

Choose Your Foods: Exchange Lists for Diabetes

The Exchange Lists offer a large selection of foods grouped together because they have about the same nutritional content. Each serving of a food has about the same carbohydrate, protein, fat, and calories, as the other foods in that list. Any food within a list can be "exchanged" for another food in the same list.

Ask your doctor for a copy of the *Changing Life With Diabetes* booklet, Carb Counting and Meal Planning from Novo Nordisk. It includes the Exchange Lists for Diabetes and other useful information on healthy eating. Use the Exchange Lists in Carb Counting and Meal Planning with this meal planning information.

To become a member of our *Changing Life With Diabetes* program, enroll online at ChangingDiabetes-us.com. Another resource that can help you manage your diabetes is our free Novo Nordisk Tip Line at 1-800-260-3730.

1500 Calorie Meal Plan
